

## World First: Bio valve for coffee packaging

The WICOVALVE® W606E was developed especially for the coffee industry and can be composted according to industrial standard EN 13432 in combination with biodegradable laminates.

In combination with biocompostible laminate materials, the coffee roaster can now offer a packaging system that is totally biodegradable and provides optimized protection of whole-bean coffee against aroma loss.

The extensive range of valves has now been ideally complemented with the biocompostible W606E. It is based on the highly popular W606 coffee valve and is designed for heat-sealing applicators.

We would be happy to advise you personally and develop the best possible solution for your application. Contact us!

### Product overview

Typical application

Bean coffee

Pressure level

3.0 - 7.0 mbar

Body material

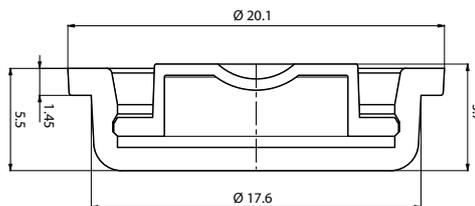

Ecovio®

The opening pressure fluctuation range is very narrow ( $\pm 2$  mbar)

Filter

without filter

Dimension

Colour

White

Compliant with:
